

Test Automation Engineer

GA Atlanta

Job Description:

Required Skill:

- Build, recommend, and maintain appropriate frameworks to automate test scenarios
- Convert manual regression scenarios to automated test cases
- Ensure that automated tests are integrated and execute reliably in the CI/CD environments
- Work as a member of an Agile SCRUM team delivering high-quality software in sprint environment
- Collaborate with product owners to understand requirements, new features, and resolve issues
- Document software issues and enhancement requests and assist development of comprehensive steps for duplication of the defects found while performing manual functional, integration, and regression tests
- Help diagnose, reproduce and test fixes. Troubleshoot, stabilize and optimize the existing daily QA automation jobs
- Experience in QTP, CodedUI, Silk Test, Selenium & Cucumber
- Must have great communication and organizational skills.

Additional Skills:

- Experience with Tosca testing tool
- Knowledge of Cyber security requirements
- Knowledge of testing windows based applications on App-V and Virtual machines

Responsibilities:

- Develop and Maintain test automation framework and deploy them in continuous validation environments
- Support regular cadence of production and non-production updates and hotfixes for live service of multiple products
- Work directly with QA testers, and developers to ensure coordinated releases
- Triage and troubleshoot live issues to resolution with attention to detail and optimization
